Impact of Marketing Channels

Hypothesis :-

Does mean of online sales quantity for 4 different channels (EM, OP1, OSM,OB) make any difference or not.

So, we sampled 5000 records for each channel and Used ANOVA to find out if the choice of advertising medium makes any difference

H0: All channels perform equally, $\text{mean(EM)} = \text{mean(OB)} = \text{mean(OP1)} = \text{Mean(OSM)}$

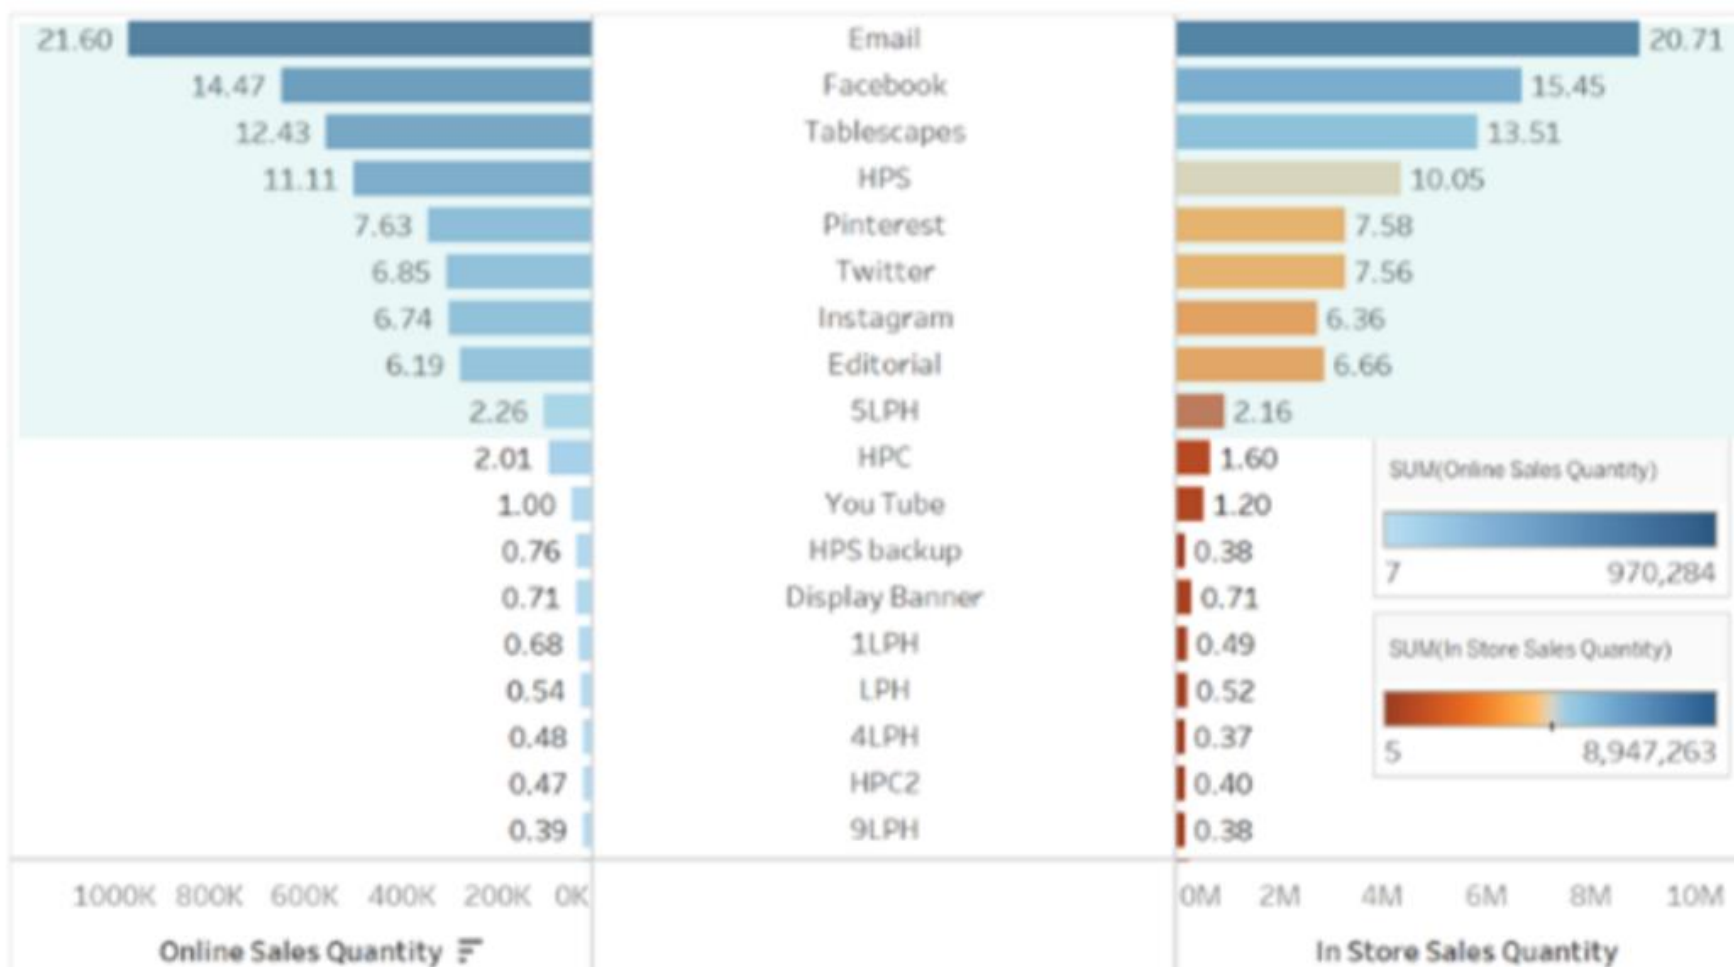

H1: At Least two of them are not equal

Anova: Single Factor

ANOVA Test gave us result that choosing an advertising medium makes difference in sales.
